kranotec

A Notterkran Group company

Welcome to Kranotec

As a vehicle manufacturer, Kranotec GmbH specialises in assembly of loading cranes, as well as hooklifts and set-down equipment, onto commercial vehicles. Transport companies and vehicle and crane manufacturers across Europe count on our services when they want high-quality and the best results for their crane and hooklift projects. Our own flatbed range and other in-house developments enable us to reduce interfaces in assembly and realize entire vehicle projects from start to finish.

Our customers need durable, practical and economical crane or hooklift solutions. We match vehicle, equipment and other elements, such as flatbeds, to each customer's individual needs as a comprehensive response and provide the right vehicle solution.

With over 3,200 square metres of indoor space at our site in Ebersbach (Saxony), vehicle manufacture, Crane Mounting Competence Center and steel fabrication have enough space, specialist staff and machinery for planning and realizing even complex vehicle builds on commercial vehicles.

Kranotec gives you: Complete and comprehensive project realization from a single source with crane and hooklift products from global, market-leading manufacturers.

We also supply steel fabrication components for the group's various body centres, as well as other vehicle manufacturers throughout Europe who use Kranotec's in-house developments.

As a company in the Swiss Notterkran Group, we are committed to quality and customer satisfaction.

Thomas Notter
Managing Director

Challenging assembly projects completed by Kranotec

Individual and small-series production

Kranotec hooklift assembly

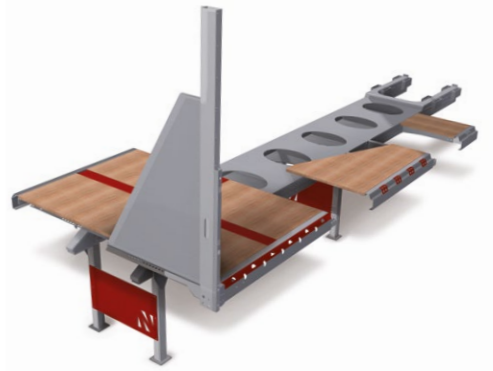

At the Kranotec body centre in Ebersbach (Saxony) we have completed a variety of different vehicle projects in recent years, right down to small-series production. Our customers are vehicle and equipment manufacturers from all over Europe who build on our quality and expertise.

Kranotec has its own flatbed range that is suitable for use with loading cranes to achieve:

- Crane and flatbed in one project from one manufacturer
- Modular end-to-end solutions with few interfaces in the procurement process
- Reduced running costs throughout the entire lifespan
- Fast delivery

Kranotec flatbed range

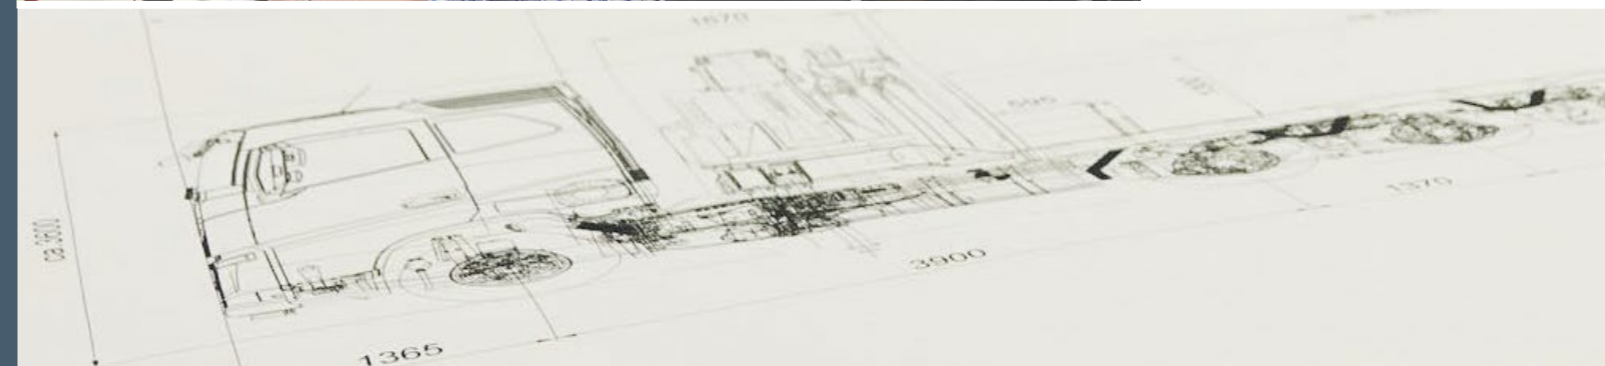

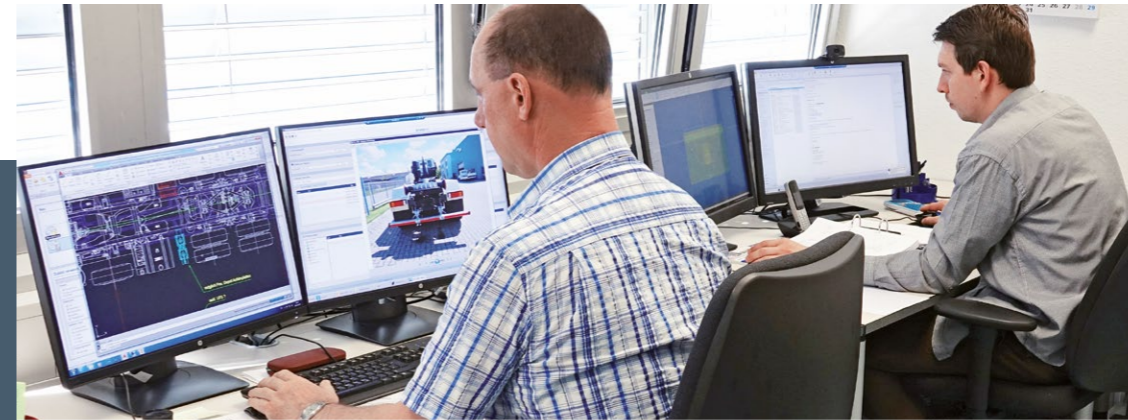

The Kranotec subframe: An innovation for improved cost-effectiveness and flexibility. Low-weight and torsion-resistant, designed with screw connections for quick assembly of parts, extremely low body height, suitable for crane bodies both behind the cab and at the rear.

From project planning and CAD development ...

Kranotec plans, develops and constructs your crane vehicle. In the in-house development and design department, Kranotec engineers and project managers design individual solutions at 3D-CAD workspaces, laying the foundations for precisely detailed and quality-oriented vehicle manufacture. Practical knowledge and experience are as important here as technical know-how, methodological knowledge and skilled construction. We are a complete supplier even in this phase and can provide all services in order to complete your vehicle project from a single source.

Special solutions and ...

With the construction site taxi, Kranotec has developed a unique vehicle that satisfies the customer's unusual requirements in many aspects. The vehicle is used to transport construction machinery.

The vehicle project

Kranotec sees your vehicle as a project. We coordinate commercial vehicle and crane manufacturers, as well as other partners. At the centre are our professional and experienced project managers who know the interfaces and guarantee that quality and execution really do satisfy your requirements in the end.

In-house product developments are our strength

In recent years, Kranotec has developed many of its own products to increase the practicality of manufacturers' products. Some of our products are special applications for which there are no or only insufficient solutions on the market.

Kranotec products and solutions

- Kranotec flatbed range
- Pneumatic underride guard (PUFS)
- Kranotec quick change system (SWS)
- Kranotec assembly equipment

... In-house developments rear underride guard

...to final assembly and vehicle handover

The entire manufacturing process, including final assembly and approval, takes place in Crane Mounting Competence Center in Ebersbach (Saxony). The specialists who work here have the necessary experience and diligence for assembling cranes and hooklift equipment.

With over 3,200 square metres of indoor space and more than 30 production staff, we also work on several projects in parallel and in small-series production. We make many steel components ourselves using our modern machine fleet so that we can guarantee high quality.

Kranotec is ISO 9001 and ISO 14001 - certified for quality and environmental management.

More than ten assembly bays

Competence and dedication

In the end it's crucial that the vehicle and equipment work together perfectly, no compromises have been made on quality and that the solution proves itself during demanding everyday use.

Experts in steel fabrication

Kranotec specialises in fabrication of material and labour-intensive components from steel, stainless steel and aluminium. We have the facilities we need at our site in Ebersbach (Saxony) to manufacture components for businesses who have been unable to achieve any real added value in this segment and who have chosen to specialise in development and design and assembly and supply of their own solutions and products.

Kranotec – a Notterkran Group company

As a quality provider of loading crane bodies and hooklift equipment, Notterkran Group represents well-known manufacturers and advises on applications in a variety of fields. Our home market is Switzerland and we are also a partner for vehicle manufacturers throughout Europe with our subsidiary Kranotec.

Our customers benefit from our group's expertise and experience in construction and assembly with three body centres. Notterkran Group has more than 150 employees. We celebrated our 55th anniversary in 2018.
